
FOR IMMEDIATE RELEASE

Alliance between American University and Canadian company will revolutionize security audits in the construction industry. *West Virginia University partners with Laubrass Inc. to develop a tool for optimizing the performance and standardization of safety audits.*

**Montreal, Canada
October 22nd, 2009**

Laubrass Inc., a leading provider of auditing software for handheld computers, today announces a technology development alliance with the highly acclaimed West Virginia University to develop a new software program to monitor and report on safety standards for construction sites.

“We are very excited about this opportunity to work with the West Virginia University. Using our expertise and experience with handheld technology and auditing software, combined with WVU’s knowledge of the safety standards involved in the construction industry, we are certain to deliver a superior solution with the Buildsafe Audit Tool,” said Charles Brassard, President and Founder of Laubrass Inc.

This new partnership between Laubrass and West Virginia University will allow the development of a standardized inspection protocol to be completely automated on handheld computers. This new development will revolutionize the process of conducting and tracking safety audits in the construction industry.
